  - a) All BOPE connections subjected to well pressure will be flanged, welded, or clamped.
  - b) Choke Manifold:

- i) Tee blocks or targeted 'T's will be used and anchored to prevent slip and reduce vibration.
- ii) Two adjustable chokes will be used in the choke manifold.
- iii) All valves (except chokes) in kill line choke manifold and choke line will not restrict the flow.
- iv) Pressure gauges in the well control system will be designed for drilling fluid.

**C) BOPE Testing:**

- a) BOPE shall be pressure tested when initially installed, whenever any seal subject to pressure testing is broken, or after repairs.
- b) All BOP tests will be performed with a test plug in place.
- c) BOP will be tested to full stack working pressure and annular preventer to 50% stack working pressure.

1000 ± – TD	3,000# Ram Double BOP & Annular with Diverter & Rotating Head

NOTE: Drilling spool to accommodate choke and kill lines.

## 5. **MUD PROGRAM**

- A) Mud test will be performed at least every 24 hours and after mudding up to determine density, viscosity, gel strength, filtration, and pH.
- B) Gas-detecting equipment will be installed and operated in the mud-return system from top of Green River Formation to TD.
  - a) Flare line discharge will be located no less than 100 feet from the wellhead using straight or targeted 'T's and anchors.

Dear Diana:

Axia Energy, LLC respectfully submits this request for exception to spacing (R649-3-11) based on geology since the well is located less than 460 feet to the drilling unit boundary. Axia Energy, LLC is the only owner and operator within 460 feet of the surface and target location as well as all points along the intended well bore path and are not within 460 feet of any uncommitted tracts or a unit boundary.

Thank you very much for your timely consideration of this application. Please feel free to contact Jess A. Peonio of Axia Energy, LLC at 720-746-5212 or myself should you have any questions or need additional information.

Sincerely,

Don Hamilton

## Geologic Statement of Basis

Axia proposes to set 1,000 feet of surface pipe, cemented to surface. The depth to the base of the moderately saline water at this location is estimated to be at approximately 500 feet. A search of Division of Water Rights records shows no water wells within a 10,000 foot radius of the center of Section 16. The surface formation at this site is the Uinta Formation and alluvium derived from the Uinta Formation. The Uinta Formation is made up of interbedded shales and sandstones. The sandstones are mostly lenticular and discontinuous and should not be a significant source of useable ground water. The proposed casing and cement should adequately protect ground water in this area.

## Surface Statement of Basis

This proposed pad is on state surface with state minerals. Surface owner representative Jim Davis attended the onsite but stated no concerns or requests regarding this site. Ben Williams of the UDWR was also in attendance and stated that this is pronghorn habitat but made no recommendations. Axia representative stated that a 20 mil liner would be used for this reserve pit and a felt subliner would be used if any rock is encountered. This liner proposal appears adequate for the site. An equipment color will be chosen to match the surrounding country. This appears to be a good location for placement of this well.

Appropriate information has been submitted to DOGM and administrative approval of the requested exception location is hereby granted.

### General:

Compliance with the requirements of Utah Admin. R. 649-1 et seq., the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for permit to drill.

### Conditions of Approval:

In accordance with Utah Admin. R.649-3-11, Directional Drilling, the operator shall submit a complete angular deviation and directional survey report to the Division within 30 days following completion of the well.

This proposed well is located in an area for which drilling units (well spacing patterns) have not been established through an order of the Board of Oil, Gas and Mining (the "Board"). In order to avoid the possibility of waste or injury to correlative rights, the operator is requested, once the well has been drilled, completed, and has produced, to analyze geological and engineering data generated therefrom, as well as any similar data from surrounding areas if available. As soon as is practicable after completion of its analysis, and if the analysis suggests an

area larger than the quarter-quarter section upon which the well is located is being drained, the operator is requested to seek an appropriate order from the Board establishing drilling and spacing units in conformance with such analysis by filing a Request for Agency Action with the Board.

Compliance with the Conditions of Approval/Application for Permit to Drill outlined in the Statement of Basis (copy attached).

Cement volume for the 5 1/2 production string shall be determined from actual hole diameter in order to place cement from the pipe setting depth back to 2000' MD as indicated in the submitted drilling plan.

Surface casing shall be cemented to the surface.

**Additional Approvals:**

The operator is required to obtain approval from the Division of Oil, Gas and mining before performing any of the following actions during the drilling of this well:

- Any changes to the approved drilling plan - contact Dustin Doucet

Three Rivers 16-21-820 (API # 43047532290000)  
NENW Sec 16-T8S-R20E  
Uintah County, UT

Mr. Doucet:

In accordance with our recent correspondence with your office, Axia Energy respectfully submits the below specifics concerning the proposed directional drilling of the subject well.

- Axia Energy, LLC is the sole owner of 100% of the leasehold rights within 460' around proposed wellbore and bottom hole location of the captioned well.
- In addition, the State mineral ownership is also consistent throughout the wellbore path.
- The directional drilling of the well is proposed to limit surface disturbance within the project and affected surface owners and utilize an existing pad.

Therefore, based on the above stated information, Axia Energy requests the permit be granted pursuant to R649-3-11.

Thank you in advance for your consideration. Please feel free to contact me at 720-746-5212 if you have any questions or comments.

Sincerely,  
AXIA ENERGY, LLC

Three Rivers 16-21-820

API: 43047552290000

Notice of intent – commingle Wasatch and Green formations

---

- 1.1 Exhibit A showing location of the well.
- 1.2 Method of Completion: the pools will be completed from the lower portion of the well (Wasatch) to the upper portion of the well (Green River) in succession. Intervals will be selectively perforated and fracture stimulated starting in the lower portion of the well. A composite bridge plug will be set to isolate the previously perforated/stimulated interval, and additional perforations will be added and fracture stimulated. Perforating/Stimulation will occur in this manner through the Wasatch and Green River formations in 6-8 stages. Once all desired intervals have been perforated, stimulated and isolated, all composite plugs will be drilled out. A tubing string with rod pump will be run to produce Wasatch and Green River oil in a commingled fashion.
- 2 Allocation should never be necessary due to equal mineral ownership in all pools. However, if it ever became necessary, allocation would be based on individual formation production percentages developed during the initial testing of the well.
- 3 Affidavit of Lease Ownership - Acknowledgement that Axia Energy, LLC has provided a copy of this application to contiguous leasehold and unleased mineral owners to the NE/4 NW/4 of Section 16-T8S-R20E of Uintah County, Utah.

Three Rivers 16-21-820 (API # 43047532290000)  
NENW Sec 16-T8S-R20E  
Uintah County, UT

Mr. Doucet:

In accordance with our recent correspondence with your office, Axia Energy respectfully requests an exception location for the above referenced well.

Axia Energy, LLC is the sole owner of 100% of the leasehold rights within 460' around the wellbore of the captioned well. In addition, the State mineral ownership is also consistent.

The request is necessary for optimal well placement and to maximize the number of potential wells to be drilled from a single surface disturbance when considering directional drilling constraints. The proposed BHL of 500' FNL & 1,980' FWL of Section 16, T8S/R20E gives an inter-well distance of 856' to the nearest proposed well.

We shall therefore appreciate your granting Axia's exception location request.

Thank you in advance for your consideration. Please feel free to contact me at 720-746-5212 if you have any questions or comments.

Sincerely,  
AXIA ENERGY, LLC

Jess Peonio

AXIA THREE RIVERS CENTRAL TANK FACILITY

Axia Energy, LLC submits the following documentation as follow-up to verbal and email approval to commingle certain wells with common interests per attached diagram.

Allocation Proposal:

Each well that comes on will be set-up and plumbed individually with (2) 500 bbl oil tanks and (1) 500 bbl water tank for each producing well.

When production on a well basis exceeds current individual well storage, production would be gauged and an internal run ticket would be generated. The oil would then be shipped to the centralized tank facilities per attached allocation diagram.

Oil Sales from Centralized Storage Facility would be allocated back to the applicable well on a first in-first out basis and quantity would be based on the run ticket generated when the oil is sold to oil purchaser.

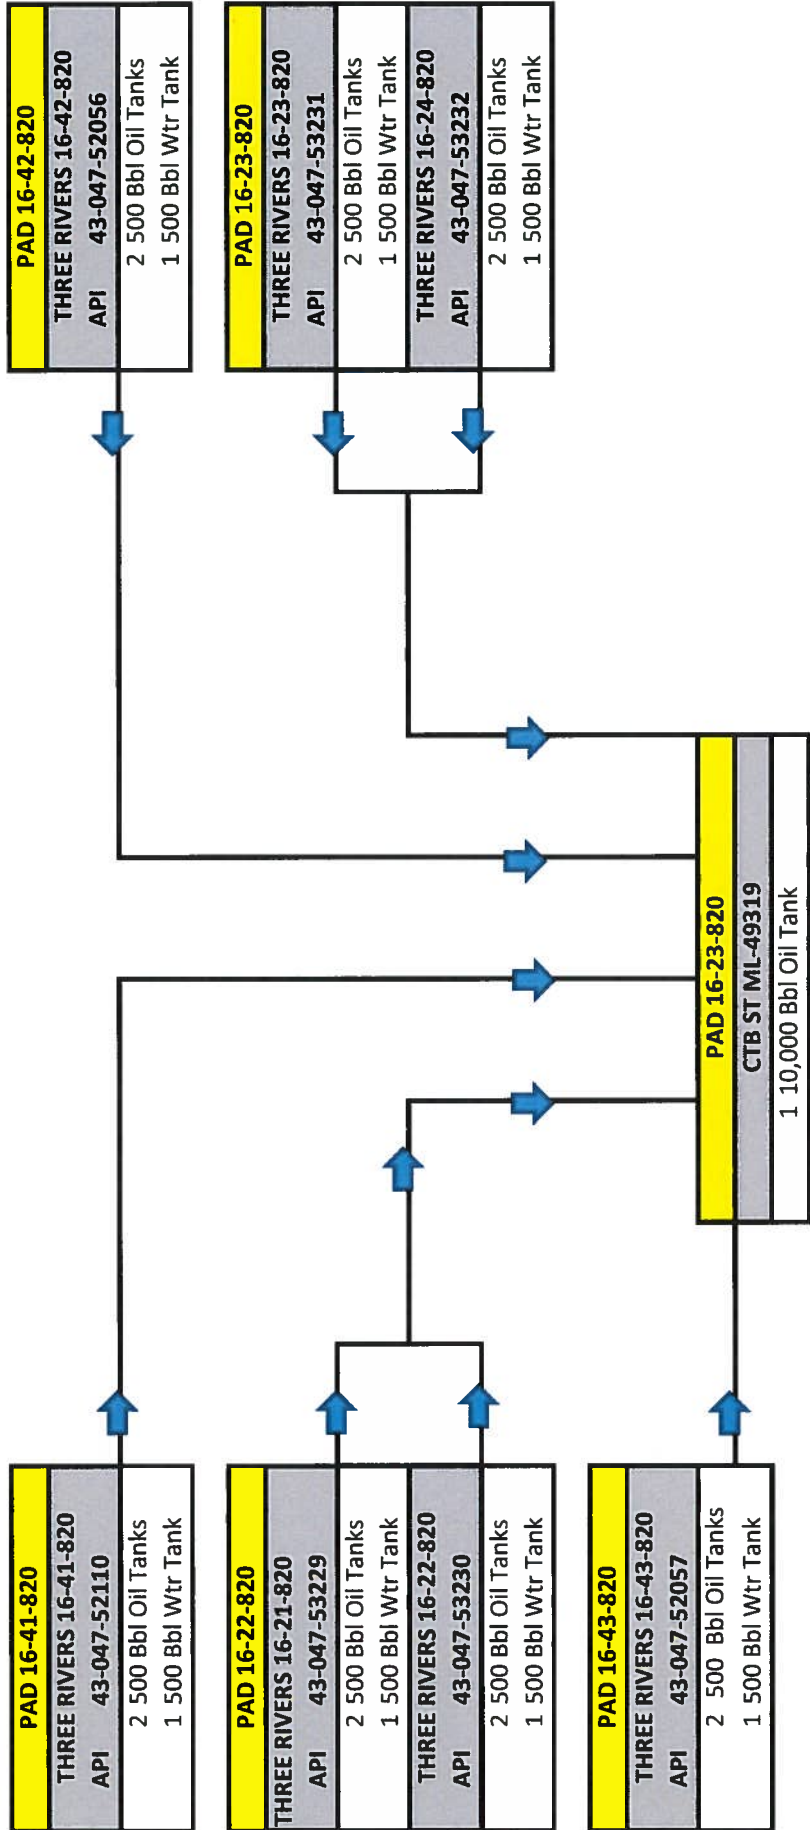

Proposed centralized storage facilities are set up by State or Federal lease number, or in the case of Fee wells, by common interest.

Reporting Requirements:

- When oil is transferred to the central tank battery from a well location, the volume will appear on Form 11 (Monthly Disposition Report) as transported volume for the applicable entity location.
- A Form 12 (Transfer of Oil) for the volume going to the CTB will be prepared with any applicable internal run tickets attached.

EFFECTIVE DATE: October 1, 2013

NAME: THREE RIVERS CTB ST ML-49319  
DESC: THREE RIVERS WELLS IN SECTION 16 OF TOWNSHIP 8S-RNG 20E THAT CAN FLOW TO CENTRAL TANK BATTERY  
BASED ON COMMON INTEREST/LEASE NO  
LEASE: STATE LEASE ML-49319

When well tanks get full and we are unable to sell, we would move the oil to the central facility for storage/sales using an internal run ticket. Sales from the Central Tank Battery would be allocated back to the wells on a first in - first out basis.

Notice of Intent start: Sept 1, 2013

Axia Energy, LLC respectfully requests a variance to the 1800 MCF/MO limit of flaring oil production associated gas on the subject well to the next Utah Board of Oil, Gas and Mining Hearing considering the next filing date. Axia Energy has constructed gas gathering infrastructure within the field and the subject well has been tied into the system but is awaiting gas gatherer ROW approval and construction to send the gas to sales. Axia Energy is requesting the variance to the next available Utah Board Hearing so that: a) production rates can be evaluated to properly size production equipment on the subject well and future wells, b) a decline curve can be evaluated for EUR determination and future planning of drill schedule and capital, and c) production will not be curtailed and EUR decreased due to the shut-in and potential damage to the reservoir (analogous projects operated by Axia Energy have shown a production and EUR decrease due to lengthy shut-ins). The last (Oct., '13) monthly flaring volume for the subject well was 1,937 MCF/MO and efforts will be made to minimize flaring by maximizing fuel usage until the hearing.

RE: **Directional Drilling – R649-3-11**  
Three Rivers 16-21-820 (API # 43047532290000)  
NENW Sec 16-T8S-R20E  
Uintah County, UT

Mr. Doucet:

In accordance with our recent correspondence with your office, Axia Energy respectfully submits the below specifics concerning the proposed directional drilling of the subject well.

- Axia Energy, LLC is the sole owner of 100% of the leasehold rights within 460' around proposed wellbore and bottom hole location of the captioned well.
- In addition, the State mineral ownership is also consistent throughout the wellbore path.
- The directional drilling of the well is proposed to limit surface disturbance within the project and affected surface owners and utilize an existing pad.

Therefore, based on the above stated information, Axia Energy requests the permit be granted pursuant to R649-3-11.

Thank you in advance for your consideration. Please feel free to contact me at 720-746-5212 if you have any questions or comments.

Sincerely,  
AXIA ENERGY, LLC

Jess Peonio  
Senior Drilling Engineer & Regulatory Manager
